GUITAR PEDAL SOLDERING WORKSHOP

DATE

What is a Guitar Pedal?

A Guitar Pedal is essentially the “middleman” between the guitar and an amplifier.

Today, we will be making a Delay pedal!
(Echo... echo... echo...)

Delay Pedal Controls

Time

Controls the time between the original sound and the echo.

Feedback

Controls how many times the sound repeats.

Volume

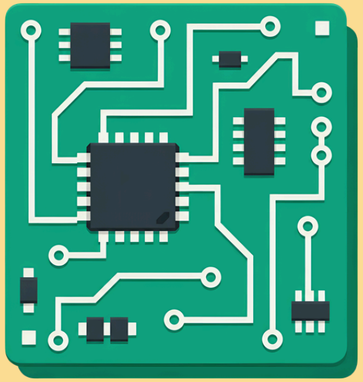

Controls how loud the delayed sound is.

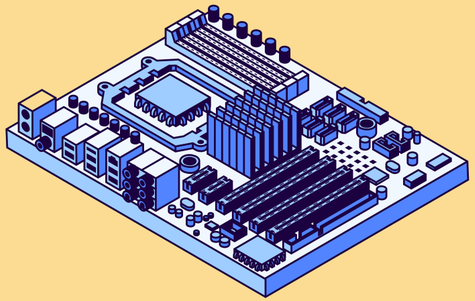

Diagram of Components

How the Pedal Works

Guitar → PCB → Microcontroller → Amplifier

What is Soldering?

Soldering is the process of joining 2 metal surfaces together by melting a filler alloy; it acts as a “metal” glue”

1. Preheat the Soldering Machine 375 degrees C
2. Use your dominant hand to hold the soldering machine
3. lightly place the tip on the circuit board, and lighly tap the metal onto the tip as indicated in the vide
4. After each soldering round, wait ~3 seconds

Repeat until you feel comfortable!
Add video of Justin Soldering (i dont have it) ->

Soldering the PCB

Etching Design: SASE's Po the Panda

Practice your etching skills on your guitar pedal! Can you recreate Po the Panda?

winner wins their guitar pedal

Assembling the Guitar Pedal

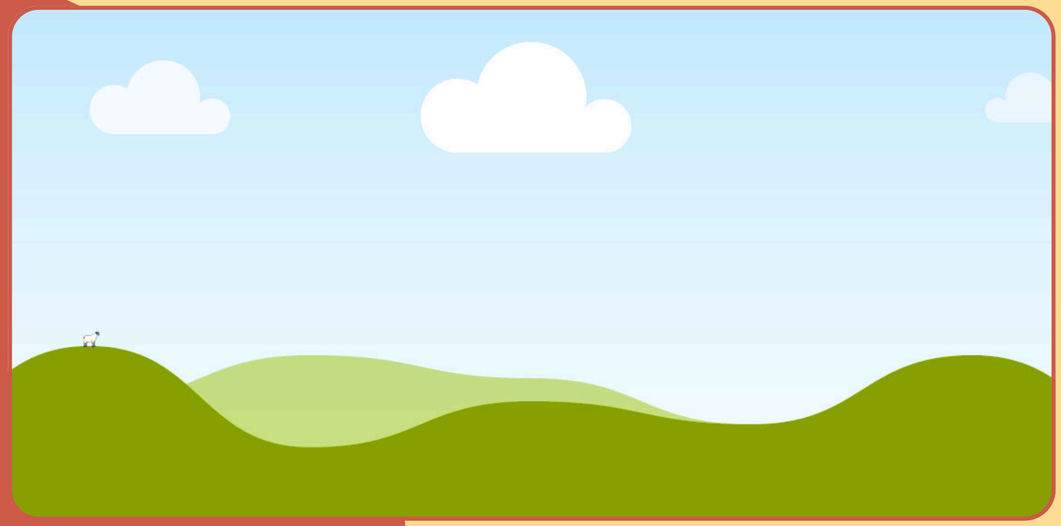

plan on how we run event

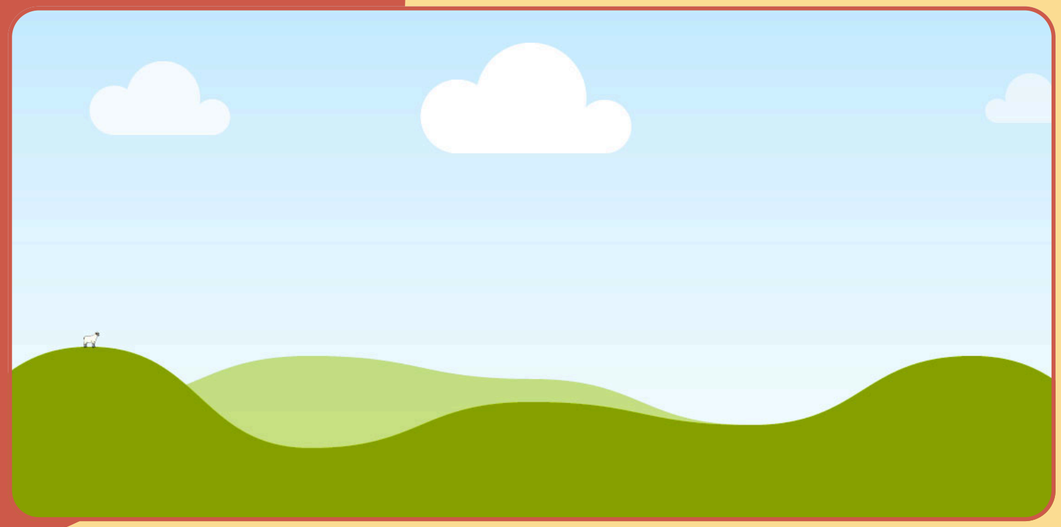

1. go through presentation
2. make them go into groups
3. each group will have some leds and copper and etching
4. people in the group take turns soldering and practicing and also etching until everyone gets the chance to feel comfortable soldering
5. one team member will go up to one of us to ask for the PCB and one of us will watch them solder it
6. After finishing soldering and etching, assemble everything
7. Test with a guitar!

THANK YOU
